

ATOM 10^{-10}M

Atoms are about 100,000 times smaller than any object that can be resolved with the naked eye. Most of the atom is "empty" space.

At the center of the atom is the nucleus—a dense region that contains nearly all of its mass.

NUCLEUS
 $10^{-14}\text{M} - 10^{-15}\text{M}$

NUCLEONS 10^{-15}M

The nucleus of hydrogen is a single subatomic proton particle with a diameter of 1.8 million billionths of a meter.

QUARK 10^{-18}M

Quarks are one type of elementary particle and are building blocks for matter.

The electron particles that orbit in the outer shells of atoms are elementary particles on a similar scale to quarks.

ELECTRON $\sim 10^{-18}\text{M}$
