

***Phyllocladus trichomanoides***

Slow-growing conifer, conical when young, developing a more rounded top with age. Leaflike, deep green, modified shoots, 4–6in (10–15cm) long, have 5–10 lobed segments.

☀️💧 Z8–11

***Sciadopitys verticillata***  
(Japanese umbrella pine)

Conical conifer with reddish-brown bark. Deep green leaves, yellowish beneath, are whorled at the ends of shoots, like umbrella spokes. Ovoid cones ripen over 2 years.

☀️💧 Z5–9

***Picea morrissonicola*** (Taiwan spruce)

Upright, conical conifer, becoming columnar with age. Needlelike, deep green leaves are pressed down on slender, pale brown shoots. Cones are cylindrical and 2–3in (5–7cm) long.

☀️💧 Z7–9

***Calocedrus decurrens*** (Incense cedar)

Upright conifer with short, horizontal branches and flaky, gray bark, brown beneath. Has flat sprays of aromatic, dark green leaves. Resists honey fungus.

☀️💧 Z5–8

***Pinus cembra*** (Arolla pine)

Dense, conical conifer with dark green or bluish-green leaves grouped in 5s. Ovoid, bluish or purplish cones, 2½–3in (6–8cm) long, ripen brown.

☀️💧 Z3–7

***Taxus baccata* 'Fastigiata'** (Irish yew)

Slow-growing conifer with a broadly conical, later domed crown. Erect branches bear needlelike, flattened, dark green leaves that stand out all around shoots. Female plants bear cup-shaped, fleshy, bright red fruits.

☀️💧 Z7–8 ⚠️

***Pinus contorta* var. *latifolia***  
(Lodgepole pine)

Conical conifer with bright green leaves, 2½–4in (6–9cm) long. Small, oval cones remain closed on the tree. Is suitable for a wet or coastal site.

☀️💧 Z6–8

***Torreya californica***  
(California nutmeg)

Upright, conical conifer with very prickly, glossy, dark green leaves, yellowish-green beneath, similar to those of yew. Cones are purplish-green and olivlike.

☀️💧 Z7–11

***Chamaecyparis thyoides***  
(White cypress)

Upright conifer with aromatic, green or blue-gray leaves in rather erratic, fan-shaped sprays on very fine shoots. Cones are small, round, and glaucous blue-gray.

☀️💧 Z3–8 ⚠️
