

HELENIUM

Of all the late-summer, daisy-flowered perennials, *Helenium* are among the most colorful. They have become increasingly popular with the rise of naturalistic plantings, to which they are well suited, although they also add a dramatic note to herbaceous borders. The stout stems bear shuttlecock-shaped flowers in fiery tones of red, orange, and yellow that last for many weeks. Plants seldom need staking and form slowly spreading clumps if grown in sun and fertile soil. To lengthen the flowering season, select a variety of forms, and cut back some in early summer to promote later flowering.

MEDIUM

FALL

RED

Centranthus ruber (Red valerian)

Perennial forming spreading colonies of fleshy leaves. Branching heads of small, star-shaped, deep reddish-pink or white flowers are borne above foliage from late spring to fall. Thrives in poor, exposed sites. **H** 2–3ft (60–90cm), **S** 1½–2ft (45–60cm) or more.

☀️ ⚡️ Z5–8

Lobelia cardinalis 'Queen Victoria'

Clump-forming perennial. From late summer to mid-fall, spikes of blazing red flowers on branching stems arise from basal, deep red-purple foliage. **H** 3ft (1m), **S** 1ft (30cm).
