

is tolerated if necessary. Propagate by seed in spring or by semiripe cuttings in summer. ① All parts may aggravate skin allergies.

G. ‘Canberra Gem’ illus. p.201.

G. juniperina f. sulfurea, syn. *G. sulfurea*, illus. p.206.

G. robusta (Silky oak). Fast-growing, evergreen, upright to conical tree. H 100ft (30m), S to 50ft (15m). Fernlike leaves are 6–10in (15–25cm) long. Mature specimens bear upturned bell-shaped, bright yellow or orange flowers in dense, one-sided spikes, 4in (10cm) or more long, in spring–summer. Z10–11 (min. 41°F/5°C)

G. ‘Robyn Gordon’. Evergreen, sprawling shrub. H 3–5ft (1–1.5m), S 20–60in (50–150cm). Has leathery, dark green leaves and arching stems that bear racemes of crimson flowers with protruding, recurved styles from early spring to late summer. Z13–15

G. rosmarinifolia illus. p.203.

G. sulfurea. See *G. juniperina f. sulfurea*.

GREYIA

MELIANTHACEAE/GREYACEAE

Genus of evergreen, spring-flowering shrubs or small trees, grown for their flowers and overall appearance. Frost tender. Needs full light and well-drained soil. Water containerized specimens moderately, less when not in full growth. Remove or shorten flowered stems after flowering. Propagate by seed in spring or by semiripe cuttings in summer. Plants grown under glass need plenty of ventilation.

G. sutherlandii (Natal bottlebrush) illus. p.455.

GRINDELIA

Gum plant, Rosinweed, Tarweed

ASTERACEAE/COMPOSITAE

Genus of annuals, biennials, evergreen, often woody-based perennials and some subshrubs, grown for their flower heads. Where marginally hardy, grow in a warm, sheltered site. Requires sun and well-drained soil. Water potted specimens moderately, less when not in full growth. Remove spent flowering stems either as they die or in following spring. Propagate by seed in spring or by semiripe cuttings in late summer.

G. chilensis, syn. *G. speciosa*, illus. p.161.

G. speciosa. See *G. chilensis*.

GRISELINIA

GRISELINIACEAE

Genus of evergreen shrubs and trees, with inconspicuous flowers, grown for their foliage. Thrives in mild, coastal areas where it is effective as a hedge or windbreak as it is very wind- and salt-resistant. Requires sun and fertile, well-drained soil. Restrict growth and trim hedges in early summer. Propagate by semiripe cuttings in summer.

G. littoralis (Broadleaf). Fast-growing, evergreen, upright shrub of dense habit. H 20ft (6m), S 15ft (5m). Has ovate, leathery leaves that are bright apple-green. Tiny, inconspicuous, yellow-green flowers are borne in late spring. Z7–9. **‘Dixon’s**

Cream’, H 10ft (3m), S 6ft (2m), is slower-growing and has central, creamy-white leaf variegation. **‘Variegata’** illus. p.119.

GUARIANTHE

ORCHIDACEAE

See also ORCHIDS.

G. bowringiana, syn. *Cattleya bowringiana* (illus. p.466). Evergreen, epiphytic or terrestrial orchid for a cool greenhouse. H 18in (45cm). In fall bears large heads of rose-purple-lipped, magenta flowers, 3in (8cm) across. Has ovate, stiff leaves, 3–4in (8–10cm) long. Grow in semishade during summer and do not spray from overhead. Z12–15 (min. 41°F/5°C, max. 86°F/30°C)

GUNNERA

GUNNERACEAE

Genus of summer-flowering, rhizomatous perennials, some evergreen, grown mainly for their foliage. Some are clump-forming with very large leaves; others are mat-forming with smaller leaves. Shelter from wind in summer; where marginally hardy, cover with garden compost in winter. Some require sun while others do best in partial shade; all need moist soil. Propagate by seed in fall or spring; small species by division in spring.

G. chilensis. See *G. tinctoria*.

G. magellanica illus. p.371.

G. manicata of gardens, illus. p.443.

G. scabra. See *G. tinctoria*.

G. tinctoria, syn. *G. chilensis*, *G. scabra*. Robust, rounded, clump-forming perennial. H and S 5ft (1.5m) or more. Has very large, rounded, puckered and lobed leaves, 1½–2ft (45–60cm) across. In early summer, bears dense, conical clusters of tiny, dull reddish-green flowers. May be invasive. Z9–10

GUZMANIA

BROMELIACEAE

Genus of evergreen, almost stemless, rosette-forming, mainly epiphytic perennials, grown for their overall appearance. Frost tender. Needs semishade and a rooting medium of equal parts humus-rich soil and either sphagnum moss, or bark or plastic chips used for orchid culture. Water moderately with soft water during growing season, sparingly at other times, and keep rosette centers filled with water from spring to fall. Propagate by offsets in spring or summer.

G. lingulata. Evergreen, basal-rosetted, epiphytic perennial. H and S 12–18in (30–45cm). Forms loose rosettes of broadly strap-shaped, arching, mid-green leaves. Bears a cluster of tubular, white to yellow flowers, surrounded by a rosette of bright red, orange or pink bracts, in summer. Z14–15. (min. 59°F/15°C) **var. minor**, H and S 6in (15cm), has yellow-green leaves and bright red bracts.

G. monostachia, syn. *G. monostachya*, *G. tricolor*. Evergreen, basal-rosetted, epiphytic perennial. H and S 12–16in (30–40cm). Has dense rosettes of strap-shaped, erect to arching, pale to yellowish-green leaves. In summer, elongated spikes of tubular, white flowers emerge from axils

of ovate bracts, the upper ones red, the lower ones green with purple-brown stripes. Z14–15 (min. 59°F/15°C)

G. monostachya. See *G. monostachia*.

G. sanguinea. Evergreen, basal-rosetted, epiphytic perennial. H 8in (20cm), S 12–14in (30–35cm). Has dense, slightly flat rosettes of broadly strap-shaped, arching, mid- to deep green leaves. In summer, a compact cluster of tubular, yellow flowers, encircled by red bracts, develops at the heart of each mature rosette. Z14–15 (min. 59°F/15°C)

G. tricolor. See *G. monostachia*.

G. vittata. Evergreen, basal-rosetted, epiphytic perennial. H and S 14–24in (35–60cm). Produces fairly loose rosettes of strap-shaped, erect, dark green leaves with pale green cross-bands and recurved tips. Stem bears a compact, egg-shaped head of small, tubular, white flowers in summer. Z14–15 (min. 59°F/15°C)

GYMNOCALYCIUM

CACTACEAE

Genus of spherical to cylindrical, perennial cacti producing abundant, funnel-shaped flowers in spring–summer. Crowns generally bear smooth, scaly buds. Frost tender. Needs full sun or partial shade and very well-drained soil. Propagate by seed or offsets in spring or summer.

G. andreae. Clump-forming, spherical, perennial cactus. H 2½in (6cm), S 4in (10cm). Has a glossy, dark green stem bearing 8 rounded ribs and 7 pale yellow-white spines per areole. Yellow flowers, 2in (5cm) across, are borne in spring and summer. Z11–12 (min. 41°F/5°C)

G. gibbosum illus. p.481.

G. mihanovichii ‘Red Head’, syn. *G.m ‘Hibotan’*, *G.m. ‘Red Cap’*, illus. p.487.

G. quehlianum. Flattened spherical, perennial cactus. H 2in (5cm), S 3in (7cm). Gray-blue to brown stem has 11 or so rounded ribs. Areoles each produce 5 curved spines. Has white flowers, 2in (5cm) across, with red throats, in spring–summer. Easy to flower. Z13–15 (min. 41°F/5°C)

G. schickendantzii. Flattened spherical, perennial cactus. H and S 4in (10cm). Dark green stem has 7–14 deeply indented ribs and long, red-tipped, gray-brown spines. Bears white to red flowers, 2in (5cm) across, in summer. Z13–15

GYMNOCARPIUM

WOODSIACEAE/DRYOPTERIDACEAE

Genus of deciduous, rhizomatous, terrestrial ferns with triangular fronds, ideal for groundcover. Grow in deep shade and preferably neutral to acidic, leafy, moist soil. Propagate from spores when ripe, or divide in spring.

G. dryopteris (Oak fern). Deciduous fern. H 8in (20cm), S indefinite. Bears distinctive, divided fronds. Pinnae are triangular, with oblong to ovate, toothed and scalloped segments. Pale yellowish-green when young, the fronds darken to vivid rich green as they mature. Z4–8

GYMNOCLADUS

CAESALPINIACEAE/LEGUMINOSAE

Genus of deciduous trees, grown for their foliage. Requires full sun and deep,

fertile, well-drained soil. Propagate by seed in fall.

G. dioica (Kentucky coffee tree) illus. p.67.

Gynandriris sisyrinchium. See *Moraea sisyrinchium*.

GYNURA

ASTERACEAE/COMPOSITAE

Genus of evergreen perennials, subshrubs and semiscrambling climbers, grown for their ornamental foliage or flower heads. Frost tender. Requires a lightly shaded position in summer and any fertile, well-drained soil. Water moderately throughout the year; less in cool conditions; do not overwater. Provide support for stems. Remove stem tips to encourage branching. Propagate by softwood or semiripe cuttings in spring or summer.

G. aurantiaca (Velvet plant) illus. p.462.

‘Purple Passion’ is an erect, woody-based, soft-stemmed subshrub or semiscrambling climber. H 3–10ft (1–3m) or more. Stems and lance-shaped, lobed, serrated leaves are covered with velvety, purple hairs. Leaves are purple-green above, deep red-purple beneath. In winter, clusters of daisylike, orange-yellow flower heads are produced and these become purplish as they mature. Z14–15 (min. 55°F/13°C)

GYPSOPHILA

CARYOPHYLLACEAE

Genus of spring- to fall-flowering annuals and perennials, some evergreen or semievergreen. Needs sun. Will grow in dry, sandy and stony soils, but does best in deep, well-drained soil. Resents being disturbed. Cut back after flowering for a second flush of flowers. Propagate *G. paniculata* cultivars by grafting in winter; others by softwood cuttings in summer or by seed in fall or spring.

G. cerastioides illus. p.349.

G. elegans illus. p.299.

G. paniculata ‘Bristol Fairy’ illus. p.231. **‘Flemingo’** is a spreading, short-lived perennial. H 2–2½ft (60–75cm), S 3ft (1m). In summer, bears panicles of numerous, small, rounded, double, pale pink flowers on wiry, branching stems. Has small, linear, mid-green leaves. Z5–9

G. repens. Semievergreen, prostrate perennial with much-branched rhizomes. H 1–2in (2.5–5cm) or more, S 1ft (30cm) or more. In summer, produces sprays of small, rounded, white, lilac or pink flowers on slender stems with narrowly ovate, bluish-green leaves. Excellent for a rock garden, wall or dry bank. May also be propagated by division in spring. Z4–7.

‘Dorothy Teacher’ illus. p.362.

G. ‘Rosenschleier’, syn. *G. ‘Rosy Veil’*. Vigorous, dense, mound-forming, semievergreen perennial. H 16–20in (40–50cm), S 3ft (1m). Branching stems produce linear to lance-shaped, bluish-green leaves. In mid- and late summer, bears wide, dense clouds of double flowers, in many, loose sprays, opening white and becoming very pale pink. Z5–9

G. ‘Rosy Veil’. See *G. ‘Rosenschleier’*.
