

GREEN

***Picea abies***

(Common spruce, Norway spruce)

Fast-growing, pyramidal conifer with dark green leaves. Narrow, pendulous, glossy, brown cones are 4–8in (10–20cm) long. Much used as a Christmas tree but less useful as an ornamental.

Z3–8

***Pinus nigra subsp. nigra***

(Austrian pine)

Broadly crowned conifer, with well-spaced branches, often with several stems. Paired, dark green leaves are densely tufted. Tolerates an exposed site.

Z5–8

***Araucaria araucana***

(Chile pine, monkey puzzle)

Open, spreading conifer with gray bark, wrinkled like elephant hide. Has flattened and sharp, glossy, dark green leaves and 6in- (15cm-) long cones. Makes a fine specimen tree.

Z7–11

***Picea omorika*** (Serbian spruce)

Narrow, conical conifer, resembling a church spire, with dark green leaves that are white below. Branches are pendulous and arch out at tips. Violet-purple cones age to glossy brown. Grows steadily in all soils.

Z4–8

***Pinus radiata*** (Monterey pine)

Very fast-growing conifer, conical when young, domed when mature. Black bark contrasts well with soft, bright green leaves. Makes an excellent windbreak.

Z7–9

***Sequoiadendron giganteum***

(Giant redwood, Wellingtonia)

Very fast-growing, conical conifer. Has thick, fibrous, red-brown bark and sharp, bluish-green leaves. Is one of the world's largest trees when mature.

Z6–9

***Abies grandis*** (Giant fir, grand fir)

Very vigorous, narrow, conical conifer with a neat habit. Dark green leaves have an orange aroma when crushed. Cones, 3in (7–8cm) long, ripen red-brown. Makes a useful specimen tree.

Z5–6

***Pinus heldreichii*** (Bosnian pine)

Dense, conical conifer with scaly, ash-gray bark and pairs of dark green leaves. Ovoid cones, 2–4in (5–10cm) long, are cobalt-blue in early summer, ripening to brown.

Z4–8
