

Dangerous waters

The ocean can be a dangerous and even deadly place. Extreme weather and underwater activity can make powerful winds, huge waves, and raging storms. Oceans and coastlines can suddenly turn into disaster zones, with widespread destruction and loss of life.

WOW!

Tsunamis can travel at speeds of up to 500 mph (805 kph).

Hurricanes

Strong, twisting winds reaching up to 185 mph (300 kph) can develop quickly in tropical waters. They form in extreme heat, when water temperature rises above 78° F (26° C). Hurricanes are also called cyclones and typhoons in some parts of the world.

Floods

If rivers burst their banks, the flood water can wash away buildings, people, and animals. When huge storms cause sea levels to rise near coastlines, coastal flooding can occur.
