

Earth's oceans

Atlantic Ocean

The second-largest ocean is also the saltiest. The Atlantic Ocean forms an S-shape as it divides North and South America from Europe and Africa.

Area: 41.1 million sq miles
(106.5 million sq km)

Average depth: 11,960 ft (3,646 m)

Climate: mild and stormy

Indian Ocean

The world's warmest ocean is the Indian Ocean. It has many trade routes connecting the Middle East and Africa with Oceania and the Americas.

Area: 27.2 million sq miles (70.6 million sq km)

Average depth: 12,990 ft (3,960 m)

Climate: hot and humid

Southern Ocean

Bordering Antarctica, the Southern Ocean has cold and windy waters. Icebergs break off from the continent's huge ice sheets and float away into the ocean.

Area: 7.9 million sq miles
(20.3 million sq km)

Average depth: 14,800 ft (4,500 m)

Climate: cold and stormy
