

Space for everyone

The Sun has set. It's a clear night, and the stars are beginning to appear. Why not go outside and enjoy a bit of astronomy! It's fascinating. It's easy to do. And the more you look, the more you will see.

What do you need?

You don't need special equipment to study the stars – about 2,500 stars are visible to the naked eye in a clear sky, but you will find that binoculars help you to pick out more.
