

Spotting the constellations

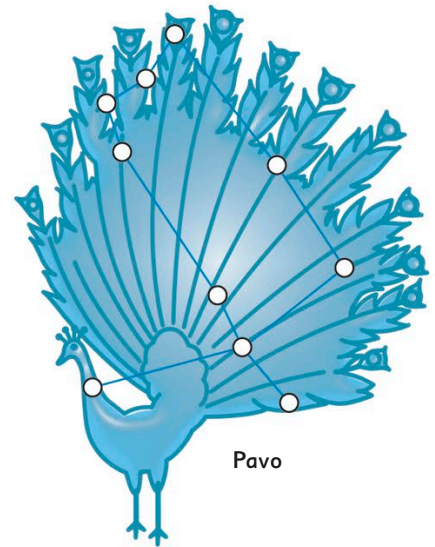

The more stargazing you do, the easier it becomes to pick out constellations. Here are a few that you can look for in southern skies.

Phoenix

Phoenix

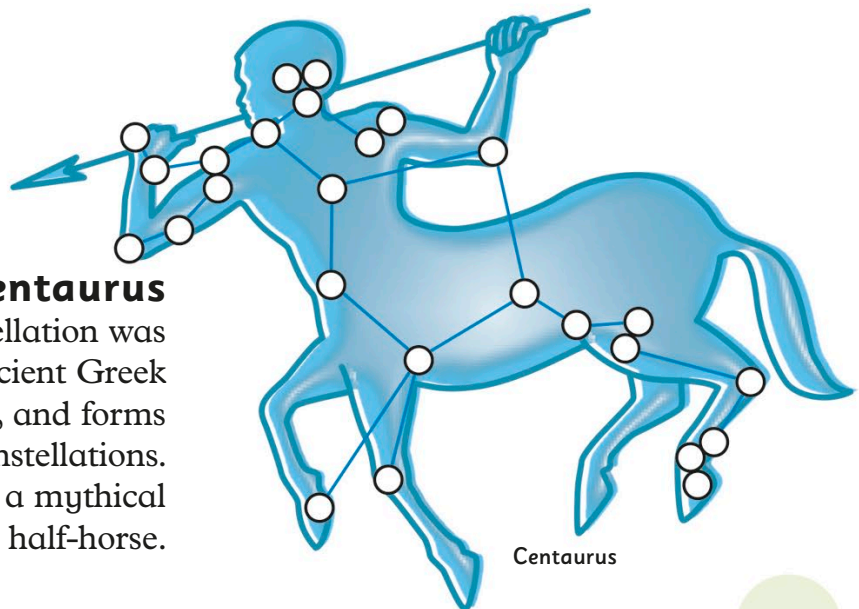

This is a mythical bird that burns itself up when it reaches the end of its life, and is then reborn from its ashes. The constellation was named in the 1600s.

Pavo

Pavo

This constellation is said to represent a peacock. Its brightest star, which represents the peacock's neck, is called Peacock.

Centaurus

Centaurus

This constellation was named by the ancient Greek astronomer Ptolemy, and forms one of the largest of all constellations. It represents the centaur – a mythical creature that is half-man, half-horse.
