

Exploring space

When you're trying to imagine the vastness of space, consider that *Voyager 1*, which was launched in 1977, has just travelled out of our solar system. A new era of space exploration has begun.

Saturn

The communications dish, which doubles as a sunshade to prevent overheating

By any other name

The word astronaut comes from two Greek words – *astron*, meaning “star” and *nautes*, meaning “sailor”. Russian astronauts are called cosmonauts (from the Greek words *kosmos*, meaning “universe”, and *nautes*). Chinese astronauts are called *yuhangyuan* – literally “universe travel worker” or “space navigator”.
