

Living in space

A bed on the wall, baby wipes for a wash, footholds, and edible toothpaste! Life on a space station is very different from life on the Earth.

Ordinary days

Astronauts need to do everything that you do. They eat, exercise, sleep, work, and play, but they have to do all these things in a home without gravity.

It's not easy to sort out bulky spacesuits in weightlessness!

New arrivals

When astronauts arrive at a space station, they bring supplies with them. Imagine trying to unpack your suitcase when you are floating!

weird or what?

Some astronauts suffer temporary hearing problems after living on a space station. Why? Because the necessary air filters, fans, and pumps make it VERY NOISY!

Keeping fit

Astronauts' muscles don't work very hard in weightlessness, so they quickly lose strength.

Hence, astronauts exercise for about two hours a day. This astronaut completed a marathon on the International Space Station treadmill.
