

Time for work

Some astronauts carry out a variety of experiments and record the results, while others do spacewalks to help construct the space station.

A tasty lunch?

Food is supplied in sealed packets and some of it is dehydrated. That means that water has to be added before the food can be eaten.

We like to keep clean, too!

Astronauts use combs, toothbrushes, and toothpaste. But the toothpaste doesn't froth, and gets swallowed. Wet wipes are useful for a speedy wash.

Hair washing is possible, but rare.

Time for bed

Most of the crew use sleeping bags, which have to be strapped to the walls of the space station. The bag holds astronauts' arms in place. Otherwise they would float about.
