

BUTTERFLIES

Butterflies are perhaps the most beautiful of all insects. It is amazing to think that a fat, leaf-eating caterpillar can become a brightly colored, fluttering creature of the air. The change happens in the butterfly chrysalis. The caterpillar's body is broken down and completely changed. After about four weeks, a fully formed butterfly emerges.

Time to wake up

The butterfly comes out of the chrysalis in three stages. During this time it is very open to attack by hungry birds or spiders.

1. No longer a caterpillar, a beautiful butterfly comes out of the chrysalis with its wings crumpled up.

Monarchs on the move

Most butterflies are born, live, and die in one place. But when winter comes to the eastern and western coasts of North America, thousands of monarchs fly south to the warmth of California and Mexico. When warm weather returns to their first home, they fly north again.
