

DINOSAURS

Few animals hold such fascination as dinosaurs. The last of these incredible creatures died about 66 million years ago, long before the first humans appeared. Fossilized skeletons and lifelike models can help

us imagine what they were like. We know that dinosaurs hatched out of eggs and grew up in just a few years. Scientists believe that some lived like we do, in families where the adults took care of their young. Most dinosaurs had tiny brains, but some may have been smart enough to hunt in packs.

Dinosaurs were the most successful big land animals of all time, and some of their relatives live around us today. We call them birds!
