

Past, present, future

Have you ever wondered what Earth looked like in the past? These pictures show you how the continents have moved over the last 300 million years, and how the world may look 50 million years from now.

The restless Earth

This spot in Iceland is where two plates are moving apart, forming new land in the gap.

These lines show where two plates meet.

Changing places

The land is coming together to make one gigantic continent.

All together

The supercontinent has come together. It is called Pangaea.

Worlds apart

The land is drifting apart again. Pangaea is splitting into two, Laurasia and Gondwanaland.

Familiar ground

Today, the world looks like this, but the continents are still moving.

Looking Ahead

This is how the world may look in 50 million years. Can you spot how the land has changed its shape? To start you off, find Africa on the globe and see how it has joined up with Europe.
