

With their strong, hooked beaks, parrots can crack open tough nuts.

Red-fronted parrots are about 10 inches (25 cm) tall and live in Africa.

Parrots hold their food with their claws. Some use their right foot and others their left!

This hummingbird's beak is just the right shape to reach to the bottom of the flower.

Hummingbirds are the only birds that can fly backward!

Hovering hummingbird

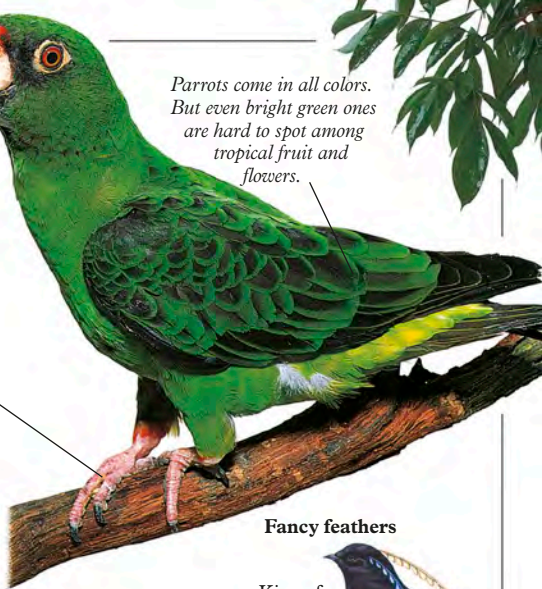

By flapping their wings very fast, hummingbirds can hover near a flower. They then suck out the flower's juice, or nectar.

Cock-a-doodle-doo!

Chickens have been bred from tropical birds, called jungle fowl. These wild birds look and sound a lot like chickens, but they don't lay as many eggs.

Parrots come in all colors. But even bright green ones are hard to spot among tropical fruit and flowers.
