

Self assembly

When the pioneers came to set up home, they had to build their own houses. Some made them out of logs, but others used chunks of dry earth cut from the ground.

The top was made of canvas held up by a frame of hoops. It helped keep out rain and dust.

The wheels were made of wood and the rim was covered in iron. Wheels often broke and held up the wagon train.

The Great Trek

In 1835, Dutch settlers in South Africa moved in wagons to new land to escape being ruled by the British. This journey was called the "Great Trek." For safety against the Africans whose land they had entered, the settlers would carefully form their wagons into a circle at night.

The hoops were made of strong and flexible hickory wood.

The pioneers had to bring all their cooking equipment with them.
