

*It took about 22 million man-hours to complete the tower.*

*There are 26 stages where the tower gets narrower as it gets taller.*

*There are 34,600 tons of reinforced steel bars in the tower—enough to reach more than a quarter of the way around the world.*

*A team of more than 380 people worked to put on the glass and metal cladding—as many as 175 panels a day.*

## Building bridges

Simple beam bridges can span narrow streams, but bridge designs get more complicated.

## Rock steady

Buildings need a strong base, or foundation, to stop them from sinking, slipping sideways, or being blown over by the wind. Tall buildings are held down by long steel or cement piles.
