

Ice caves

Vatnajökull is among the largest glaciers in Europe. In summer, channels of melting water flow under the surface of the glacier, cutting through the ice, creating enormous caverns.

Puffins of the Atlantic

Native to the Atlantic Ocean, puffins are strong swimmers that live at sea but head for breeding colonies on land every spring. Their colorful beaks have earned them their nickname of "sea parrots."

Iceland

Europe

Hallgrímskirkja

The unusually shaped Hallgrímskirkja is the tallest church in Iceland and was completed in 1986. It stands 243 ft (74 m) tall, and the view from the top of the spire gives a spectacular view of Reykjavik.

Icelandic horses

Viking settlers brought these horses to Iceland during the 9th and 10th centuries. Small and stocky in size, the breed is hardy and tough and capable of crossing any terrain.

Aurora Borealis

Also called the Northern Lights, this incredible light display is often visible on clear nights in Iceland. The natural phenomenon is caused by solar winds hitting oxygen and nitrogen atoms high up in Earth's atmosphere.
