

Ecosystems

An ecosystem is a group of animals and plants living in a habitat, with different relationships to each other. Let's take a dip into the pond ecosystem. The arrows show how energy flows, and who benefits from each relationship.

camouflage

toad

frog

fish eggs

frog spawn

frogs die and
release nutrients to
help pondweed grow

pondweed puts
oxygen into water

fish give carbon dioxide
to the plants

pond snail

pondweed is
food for snails

pondweed
