

## Water, water

Your body is mostly water – it makes up about two-thirds of your weight.

Robot

## No substitute

The human body is too complicated for robots to copy. Robots can copy the way we walk, but they can't think or feel like we do.

## The ingredients

Your body is made of just a few simple chemicals, plus water.

**Carbon** is what diamonds and coal are made of. A fifth of you is carbon.

**Iron** makes your blood red. You have enough to make one small iron nail.

**Phosphorus** is in the tips of matches, as well as your bones and teeth.

**Sodium** and **chlorine** make salt. Blood is one-third as salty as sea water.

**Potassium** is used in some types of soap. It's also in your body fluids.

**Nitrogen** is important in muscles. It's also the main ingredient in air.

Chimps have hands like ours.

Chimpanzee

Compared to chimps, our bodies look almost hairless.

## Curiosity quiz

Take a look at the pages in this section and see if you can find these pictures.

## Being human

Although we look different from animals, our bodies are similar on the inside. Our closest animal relatives are chimpanzees.
