

The world of non-insects

There are many creepy crawlies scuttling around our planet that are not insects. Some live on land, others live in fresh water or the sea. They come in all sorts of weird and wonderful shapes.

Arachnids

Spiders, scorpions, ticks, and mites belong to a land-dwelling family called arachnids. All arachnids have eight legs and two body parts.

Tarantula

The worm family

Segmented worms like earthworms are simple animals that have a head at one end, a tail at the other, and lots of segmented body parts in between. They live on land or in water.

Despite their reputation, most spiders are harmless to humans.

A tarantula has hairs on its legs that can cause bad irritation. When the spider is annoyed, it flicks them out at the enemy.
