

Survival in the sea

The ocean can be a dangerous place and sea creatures have developed a number of clever techniques to increase their chances of staying alive.

On guard!

Some sea creatures will sting or attack if threatened. Lionfish spines contain venom that can stop a fish moving or kill it. Divers are careful not to touch lionfish.

Blending in

Many of the ocean's inhabitants are masters of disguise.

Stonefish have lumpy, mottled skin that blends perfectly with the sea floor.

Pipefish swim upright, making them almost invisible amongst seagrass.

Leopard sharks have a patterning on their skin that helps them to hide.

Lost in the crowd

Many fish swim together in shoals. When they all start moving at the same speed and in the same direction to confuse predators, it is called "schooling".
