

Age of the dinosaurs

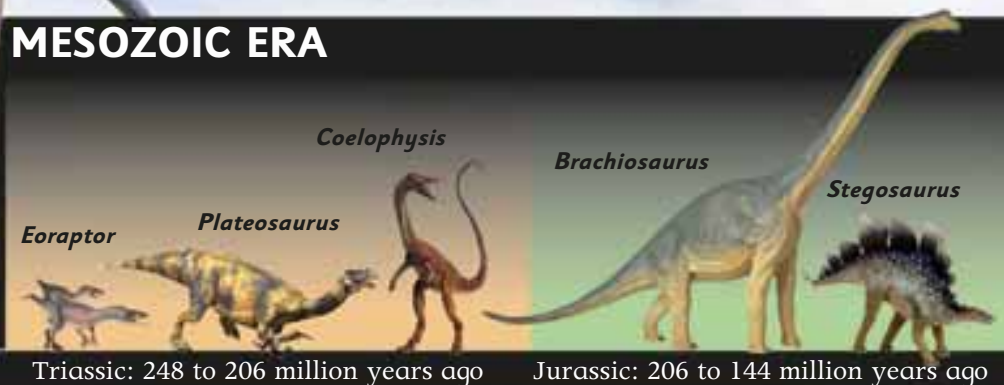

Earth has an incredibly long history, as it formed about 4,600 million years ago. Geologists divided the passage of time since then into huge chunks called eras.

The dinosaurs lived in the Mesozoic Era.

A question of time

Different dinosaurs lived at different times, and many of the best-known dinosaurs never actually met. For example, no *T. rex* ever tried to kill a *Stegosaurus* because their existence was separated by about 80 million years.

MESOZOIC ERA

Triassic: 248 to 206 million years ago

Jurassic: 206 to 144 million years ago
