

T. rex

The mighty *T. rex* roamed North America in the last couple of million years that dinosaurs ruled the planet.

T. rex's eyeballs were the size of a clenched fist.

Titanic teeth

T. rex had awesome curved teeth, each as long as a human hand. Altogether it had 58 of these pointed weapons.

Hunter or scavenger?

T. rex preyed on plant-eaters such as *Triceratops*.

T. rex walked on its powerful hind limbs.

When teeth broke, new ones grew to replace them.

Was it a killer?

We don't really know if *T. rex* was a hunter or a scavenger. It may have attacked and killed, or it may have picked at dead or dying dinosaurs. It may have done both.
