

# Electricity

Have you ever thought about what powers your television, your computer, or the lights in your bedroom? A flow of electricity makes all these things work.

## Power supply

Electricity travels to your home along wires above and sometimes below the ground. The wires above the ground hang on metal towers called pylons.

## Making electricity

Electricity is a form of energy. It can be made using any source of energy, such as coal, gas, oil, wind, or sunlight. On a wind farm, wind turbines use the energy of moving air to create electricity.

## Everyday electricity

We use electricity in all sorts of ways in our everyday lives.

**Heating:** electricity heats up household appliances such as irons and cookers.

**Lighting:** electricity lights up our homes, schools, offices, and streets.

**Communication:** electricity can power telephones and computers.

**Transport:** electricity is used to power certain vehicles, such as trams.
