

New islands

Some volcanoes are hidden under the sea. When they erupt, they can give birth to whole new islands, like Surtsey in Iceland (left). Surtsey burst out of the sea in 1963.

Before flood

After flood

Floods

Heavy rain makes rivers overflow, causing floods. Floods have enormous power and can wreck buildings and re-shape the land.

Worn by wind

Strong winds can lift sand off the ground and blast it hard against rocks. The rock is worn into strange shapes.

Hills of sand

In deserts, winds blow sand into hills called dunes. In some deserts the dunes stretch for hundreds of miles, forming a "sand sea".
