

Cleaner cars

Ordinary petrol cars use a lot of oil, and produce harmful fumes.

Now car makers are looking for alternatives to petrol.

Electric cars do not give off any kind of fumes. Hydrogen engines burn hydrogen gas, and only give off water.

To recharge an electric car, you just plug it in.

Rising energy needs

As the world's population grows, we are using more and more energy. But to stop global warming, we may have to reduce the amount of energy we all use.

Energy-saving homes

This house saves energy by using solar panels and wind turbines to generate its own non-polluting electricity. The walls are thick, so that less energy is needed to heat the house.

To reduce the energy used in manufacturing, it's a good idea to use recycled building materials.

Making a difference

There are lots of small things we can all do to save energy.

Start growing your own vegetables and fruit, even if they're only in pots.

When planning a holiday, remember that trains, boats, and cars use less energy than aeroplanes.

Instead of buying new clothes, swap with a friend or buy them second-hand.

Eat local food that hasn't travelled miles, because transporting food costs energy.

Don't throw away glass, plastics, metal, or paper – reuse or recycle them.

Take your own bags when you go shopping. Making plastic bags takes energy.

Don't leave your TV or DVD on standby – this wastes lots of electricity.

Hang your laundry outside to dry. Don't waste electricity running a dryer.

Ask your parents about insulating the roof to prevent heat from escaping.

If you get cold, put on a jumper instead of turning up your heating.
