

The Cross is made up of four stars. It is small but very bright and easy to spot.

Follow that star!

In the spring, face south using your compass and find the Cross. Then swing to the west, and you'll see Sirius, the brightest star in the night sky. Turn to face east and you'll spot Antares, the bright star in the Scorpion.

Nice for a centaur

The Centaur towers over the Cross. In Greek mythology, centaurs were violent creatures who were half-man, half-horse.

The Centaur in the sky, named Chiron, was not like other centaurs. He taught hunting, medicine, and music.

In the Centaur is the brightest cluster of old stars—Omega Centauri.

Jewel Box

Box of jewels

Near to the Cross you will see a beautiful group of stars called the Jewel Box. It contains different-colored stars, which look like jewels in the sky.
