

HABITAT KEY

Alaska
(USA)

Yukon

Grizzly bear

These large brown bears use their powerful jaws to snap up salmon in rivers and streams.

BEAUFORT SEA

Arctic Circle

Great Bear Lake

Related to raspberries, this wild berry is eaten by many animals, including birds, bears—and people!

Great Slave Lake

ROCKY MOUNTAINS

Salmonberry

COAST MOUNTAINS

American badger

Sea otters are found in shallow waters. Their thick fur keeps them warm in the ocean.

Sea otter

The largest sea turtle in the world swims long distances across the Pacific, Indian, and Atlantic Oceans.

Leatherback turtle

Sockeye salmon

Salmon in the ocean return to the freshwater streams they hatched in when it is time to lay their own eggs.

With big front feet and long claws, this animal digs burrows up to 32 ft (10m) long.

North American taiga

Taiga areas are made of coniferous, or evergreen, forests that grow in some of the northernmost parts of the world. Grizzly bears and gray wolves live in the vast taiga of North America, which stretches across Canada, the world's second-largest country, and Alaska, the largest state in the US.

Location

Most of northern North America is taiga. Summer temperatures reach only 50°F (10°C), and there's lots of snow in the winter.
