Common pangolin

Covered in protective scales, the pangolin rolls itself into a ball when threatened.

This eagle swoops down on fish from nearby trees, grabbing them in its sharp talons.

African fish eagle

Congo

ZAMBIA

ANGOLA

Kasai
This tiny bloodsucker causes more deaths than any other creature because it passes on the disease malaria.

Anopheles mosquito

Kinshasa

Brazzaville

Slender lungfish

The lungfish lives in floodplains that often dry up. During these times, it uses its lungs to breathe air until the water returns.

Luanda

ATLANTIC OCEAN

Location

The Congo Basin is located around the equator in west-central Africa. There are hot, humid places, and cooler, dry ones. Some parts also get a lot of rain.

SCALE

200 miles

200 kilometers

Chimpanzees are one of the closest living relatives of humans.

White-throated bee-eater

The bee-eater lives in large families. It rubs bees and wasps against a hard surface to remove their stings before eating them.

Red river hog
Red river hogs move around mostly at night, returning to burrows during the day to keep cool. They live in noisy family groups called sounders.

The red river hog uses its snout to sniff out tasty roots in the ground.
