

INDIAN OCEAN

Giraffe

At up to 19 ft (5.8 m) high, the giraffe is the world's tallest land animal. Its very long neck helps it to reach acacia tree leaves high above the savanna.

TANZANIA

Lake Tanganyika

Male impalas grow beautiful ridged horns up to 36 in (92 cm) long.

Impala

Vervet monkeys spend hours each day picking dirt and parasites out of each other's fur.

Lusaka

Southern yellow-billed hornbill

This bird snaps up insects with its curved bill, tossing them into its mouth with a flick of its head.

Plum dung beetle

Dung beetles recycle animal poop. They roll it up into balls and bury them to use later as food or as places to lay eggs.

Blue wildebeest

The wildebeest looks like a cow, but it is a type of antelope. It travels an astonishing 1,000 miles (1,609 km) every year, just to find the right kind of grass to eat.

Wildebeests are also known as gnus.
