

Mediterranean scrubland

The coastal areas around the Mediterranean Sea contain rocky hills and flat, shrub-filled plains. This rare habitat is found in only a few places on Earth. Plants here can survive wildfires, and animals have to deal with hot, dry weather.

Mediterranean chameleon

This is one of only two chameleon species found in Europe. Its tongue is sticky to catch passing insects. It is also twice the length of its body!

This wolf is thinner and smaller than other European wolves. It hunts rabbits, deer, wild boar, birds, and fish.

Iberian ibex

Jeweled lizard

The sapphire-like blue spots on its body give this lizard its name. It is the largest lizard in Europe at about 23½ in (60 cm) long.

A type of wild goat, male Iberian ibexes have horns that grow up to 29½ in (75 cm) long!

This monkey is found in Africa and on the island of Gibraltar, near Spain. It is the only wild monkey in Europe.

Barbary macaque

Iberian pig

This pig is a farmed animal, but lives in open country, looking for mushrooms, roots, and acorns from cork oaks.

Mediterranean banded centipede

This centipede paralyzes its prey with a venomous bite and will give a human a painful nip too—so stay well away!

Mediterranean tree frog

This frog is usually bright green or blue. It has suckers on its fingers and toes that let it climb with ease.

The cuckoo lays its eggs in other birds' nests. When the cuckoo chick hatches, it pushes all the other eggs out—so the parent birds feed it instead!

European rabbit

The European rabbit is the ancestor of all pet rabbits in the world. Unlike its enemy, the Iberian lynx, the rabbit has been seen in yards and parks, and even in busy cities.

Location

This region includes the southern parts of Europe around the Mediterranean Sea, as well as islands like Crete that share a similar habitat.
