

Eat well

Your body needs you to eat different types of food to stay strong and healthy. Here are some things you should eat every day:

Lots of **fruit** and **vegetables**.

Some starchy food, like **bread** or **rice**.

Some protein, such as **meat**, **eggs**, or **beans**.

Some healthy oil, like **avocados** or **nuts**.

Move your body

You are meant to move, run, jump, dance, and use lots of energy. Your body needs to exercise to stay strong.

Some of your body parts, like your skeleton and your heart, are hidden away inside of you.
