

Listen!

Your ears let you hear sounds. Sounds are little vibrations in the air. The vibrations pass along your ear canal to nerve cells that tell your brain what sounds you are hearing.

Taste buds recognize five tastes: sweet, sour, salty, bitter, and umami (savory).

Tongue bumps

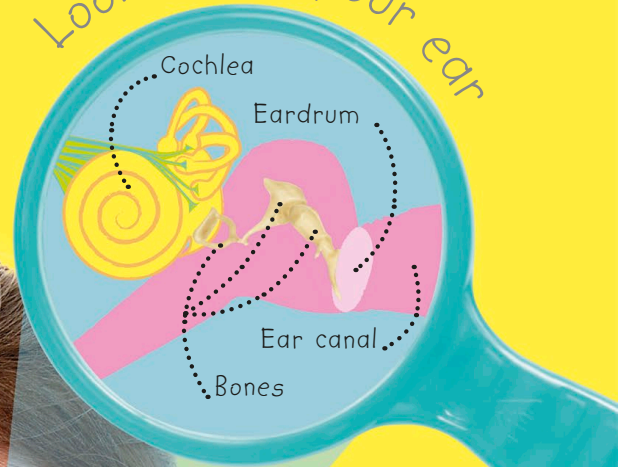

Taste!

The tiny bumps on your tongue contain taste buds. They help tell you what food tastes like.

Smell!

Your nose can smell around one trillion different scents. It helps your taste buds to taste your food.

Look inside your ear

The three little bones in your ear are the smallest in your body.

Outer ear

Did you know:

Your ears also help your balance. They tell your brain which way is up and how fast you're moving.
