

Bronchi.....

Your lungs

You breathe air in with your lungs. Bronchi are tiny tubes that take oxygen from the air to your red blood cells.

Your heart

Your heart is a strong muscle. It works hard to pump blood around your body. It never takes a break!

Blood is pumped to the lungs to get oxygen.....

Blood with oxygen is pushed out to the body.....

Can you feel your heart beating?

Try it out

Your heart pumps $10\frac{1}{2}$ pints (5 liters) of blood around your body every minute. See how hard it works.

Fill a bowl with $10\frac{1}{2}$ pints (5 liters) of water.....

Use a small cup to tip the water into a second bowl. Phew! It's hard work.....

Time one minute on a clock.
