

Paper lungs

Your lungs breathe air **in** and **out**. Make these paper lungs and watch them **expand** as they **fill** with air from your lungs.

You will need:

Sponge
Pink or red paint
2 paper bags
2 flexible straws
Tape

Real lungs are full of tubes and little pouches that move air in and out. This makes them feel soft and spongy.

Dip the sponge in pink paint and print the spongy pattern all over the paper bags.

Bend the straws as shown and tape them together just above the flexible part.

When the paint is dry, tape a bag to each straw just below the crinkly bend.
