

Yummy smells makes the mouth water!

Teeth break down food by chewing it.

Saliva makes food easier to swallow.

The food pipe goes from the mouth to the stomach.

The stomach churns food up with chemicals to make it runny.

The small intestine is more than 20 feet (6 meters) long! As the liquid food moves along, the nutrients pass into the blood.

Liver

The large intestine takes water out of the waste food. What's left is poop!

The kidneys make urine (pee).

The bladder stores urine.

Inside your stomach

Inside your small intestine

Did you know?

Gas is made during digestion. It comes out either as a burp or a fart. Pardon me!
