

Building a person

Your **body** is **made** of very **simple** stuff, but put it all together and it makes something amazing—**you!**

Did you know?

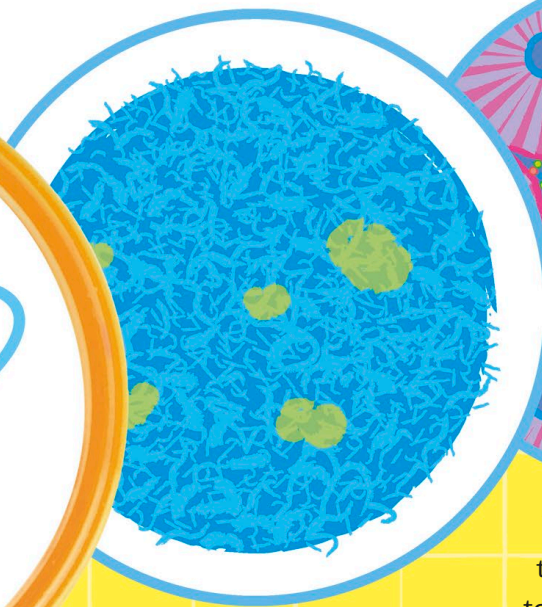

Every human body is made up of trillions of cells.

Atoms

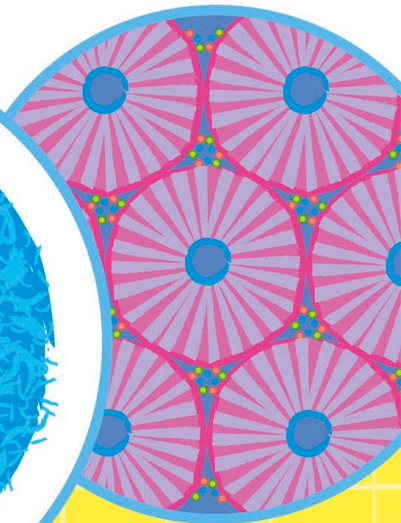

Atoms are the smallest things in the universe. They join together to make molecules, such as water.

Cells

Molecules make cells. Cells are the building blocks of all living things. There are more than 200 different types of cells in a human.

Tissues

When the same type of cells stick together they form tissues, such as skin, fat, or muscle.
