

Seeing bones

You can't see your skeleton from the outside. Doctors take x-rays to see bones inside your body.

X-ray of a hand.

Joints are where bones meet.

Most animals have skeletons

Try it out

Clench your fist and flex your arm to see your muscles pulling on your bones.

This muscle pulls on your forearm to bend it up.

This muscle relaxes.

Ready, steady, go!

Muscles are attached to your bones. They work in pairs to pull on your bones and make them move. When one muscle pulls, the other relaxes.
