

Your clever brain

Your **brain** is your body's control room. It does all your **thinking** and learning, and tells your other body parts **what to do.**

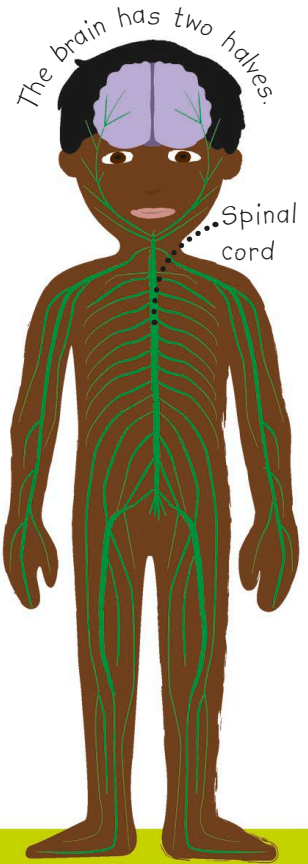

This is what brain cells look like through a microscope.

Human brains contain 100 billion nerve cells.

Your brain is wrinkled up so that it can fit inside your skull.

The brain has two halves.

Spinal cord

Nerves send signals to your brain from all over your body. The signals travel up the spinal cord in your backbone to your brain.

Did you know?

There are more than 650 kilometres (400 miles) of blood vessels in your brain.
