

Your brain controls everything you do.

At five years old, your brain is 90 per cent of its adult size.

This area does lots of thinking and imagining.

This part lets you talk.

Hello!

You tell your muscles to move here.

Touch signals arrive here.

This is where you understand words.

Sight signals come here.

Sound signals arrive here.

The cerebellum helps you move and balance.

The brain stem controls things that you don't think about, like breathing.

Learning

New brain cell connections are created as you learn. The more connections you grow, the easier it becomes to do something.
