

Yummy smells makes the mouth water!

Teeth break down food by chewing it.

Saliva makes food easier to swallow.

The food pipe goes from the mouth to the stomach.

The stomach churns food up with chemicals to make it runny.

The small intestine is more than six metres (20 feet) long! As the liquid food moves along, the nutrients pass into the blood.

Liver

The large intestine takes the water out of the waste food. What's left is poo!

The kidneys make urine (wee).

The bladder stores urine.

Inside your stomach

Inside your small intestine

### Did you know?

Gas is made during digestion. It comes out either as a burp or a fart. Pardon me!
